Peças genuínas Yamaha

As peças genuínas Yamaha são a 1^a escolha para a manutenção de qualquer veículo Yamaha porque foram especificamente desenvolvidas e concebidas em conjunto com o produto.

Ao utilizar as peças genuínas Yamaha, estará certo de que obtém:

- > Uma adequação perfeita
- > A segurança de que são utilizados materiais de alta qualidade
- > Elevada resistência ao normal desgaste
- > Normas de segurança comprovadas
- > Actualizações técnicas quando necessário

Abaixo, são apresentados detalhes específicos relativos a cada produto, que ajudam a explicar melhor a "Verdadeira qualidade das peças genuínas Yamaha". explain more about the 'Real Quality of Genuine Yamaha Spare Parts'

Filtros de ar

OS FILTROS DE AR ORIGINAIS PERMITEM MANTER A POTÊNCIA DO MOTOR E EVITAR DANOS AO MESMO

A Yamaha Motor desenvolve exclusivamente, para cada modelo, o sistema completo de admissão, incluindo o filtro de ar, para permitir um fluxo de ar ideal para o motor. Deste modo, a Yamaha concebe as características ideais do motor para cada modelo. Assim, é importante utilizar filtros de ar Yamaha genuínos para ajudar a manter o óptimo desempenho do motor.

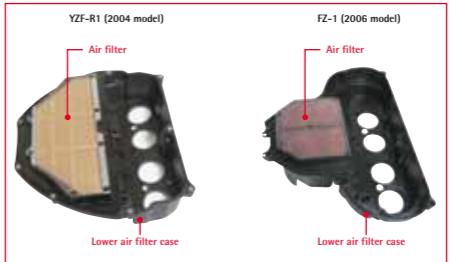

Os filtros de ar também ajudam a evitar que substâncias potencialmente perigosas, tais como areia e poeira, entrem no motor, onde podem causar danos ou desgaste na área do pistão e do cilindro. Estas partículas minúsculas também podem contaminar o óleo do motor, provocando o desgaste prematuro de outras peças do motor.

A poeira retida no filtro de ar provoca uma redução gradual do fluxo de ar ao longo da vida útil da peça, resultando na perda de desempenho do motor e no desequilíbrio do consumo de combustível. Os filtros de ar genuínos Yamaha foram concebidos para filtrar o ar e manter o respectivo caudal da forma mais eficiente possível, quando comparados com muitos filtros de ar do mercado de reposição.

FILTROS DE AR GENUÍNOS

A "CORRESPONDÊNCIA PERFEITA" PARA O MOTOR!

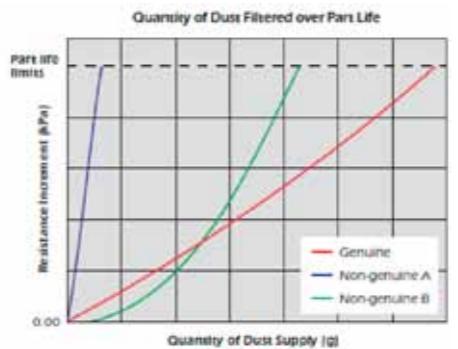

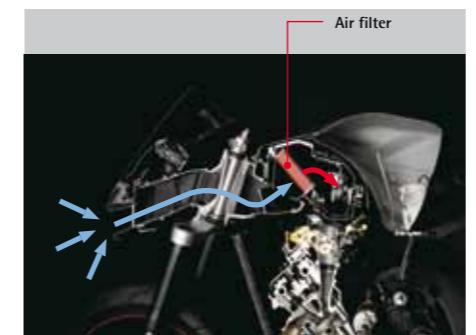

Os elementos dos filtros de ar diferem substancialmente em termos de formato, de acordo com a potência, a cilindrada, o sistema de válvulas, o carburador/sistema de injeção e a passagem de admissão. Outros factores importantes que determinam o nível de filtragem e a vida útil do filtro, são a humidade, a temperatura, a substância que compõe as poeiras, a qualidade do ar e o ambiente de condução, sendo que a Yamaha recolhe dados de utilização em vários países e em várias áreas. A Yamaha realiza também testes rigorosos em motores individuais, sendo que os filtros de ar Yamaha foram concebidos para se adequarem da melhor maneira à utilização tendo em conta os respectivos ambientes. Com base nestes testes, pode, por exemplo, decidir-se instalar filtros de ar diferentes em máquinas que se destinem a ser utilizadas na Grécia, tendo em conta as estradas poeirantes,

e na Suíça, tendo em conta o relevo montanhoso e a altitude elevada. Apesar a Yamaha, enquanto fabricante, está posicionada para estabelecer a "correspondência perfeita" entre o filtro de ar e o motor, considerando todos os aspectos envolvidos.

Exemplo de sistema de admissão de ar desenvolvido exclusivamente para o veículo

Ao comparar os modelos YZF-R1 e FZ-1, que utilizam o mesmo motor mas têm um conceito de design diferente, verifica-se que o modelo supersport YZF-R1 foi concebido para fornecer um fluxo de ar suficiente a RPM do motor elevadas, ao passo que o modelo sport touring FZ-1 possui uma potência inferior e foi desenvolvido para funcionar tendencialmente numa gama de velocidades baixa a média. No caso do modelo YZF-R1, o invólucro do filtro de ar e o filtro de ar são de grandes dimensões, ao passo que o modelo FZ-1 tem um formato totalmente diferente e um tamanho mais reduzido.

FILTROS DE AR GENUÍNOS: UMA FILTRAGEM COM ALTO DESEMPENHO!

Ao comparar cada secção transversal dos 3 filtros, nas imagens acima, pode ver-se que a área de filtragem propriamente dita do filtro de ar genuíno Yamaha é, aproximadamente, quatro vezes superior à dos filtros de ar não genuínos.

A MANUTENÇÃO CORRECTA PODE MELHORAR
CONSIDERAVELMENTE A FIABILIDADE DA BATERIA!
Os motociclos mais modernos dependem bastante da bateria
por vários motivos, em especial devido ao aumento dos
componentes eléctricos.

A bateria parece ser um componente simples, embora os
respectivos componentes tenham vindo a ser continuamente
melhorados ao longo dos anos. A bateria contém placas
positivas, separadores e placas negativas colocados
alternadamente, sendo que todos estes componentes estão
submersos numa solução electrolítica. O processo de carga e
descarga é repetido através de uma reacção química entre as
placas positivas e as placas negativas. Quando a bateria de um
motociclo não é carregada regularmente (por exemplo,
no Inverno), esta reacção química torna-se cada vez menos
eficaz, provocando um baixo desempenho e reduzindo a vida
útil da bateria. O facto de se manter a bateria carregada,
por exemplo através de um carregador Yamaha YEC, ajuda a
assegurar um desempenho máximo no decurso de um longo
período de tempo!

O carregador Yamaha YEC-40 (referência: YME-YEC40-EU-00)
tem uma função de carga/descarga especial para manter a
bateria "viva" e, até certo ponto, recuperar baterias antigas.
Existem também vários acessórios disponíveis para que
este carregador seja ainda mais fácil de utilizar, tais como
o "Comfort-indicator" (indicador de conforto), que indica
claramente o estado da bateria.

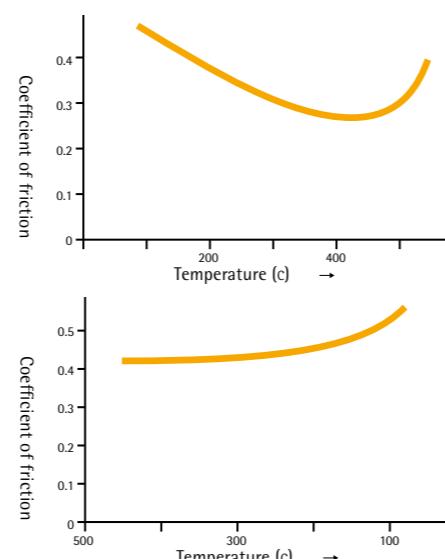

Pastilhas de travões

PASTILHAS DE TRAVÕES CONSOANTE O MODELO PARA GARANTIR A SEGURANÇA!

As pastilhas de travões genuínas Yamaha foram desenvolvidas especificamente para cada modelo Yamaha, no sentido de alcançar o melhor desempenho de travagem e o melhor equilíbrio com o chassis. As pastilhas de travões genuínas Yamaha foram especificamente desenvolvidas de acordo com as características de cada modelo Yamaha, ao contrário da maior parte das pastilhas de travões no mercado de reposição, que se destinam à instalação em vários modelos diferentes, facto que tem um elevado impacto sobre o desempenho das pastilhas de travões!

Por exemplo, os modelos WR250R e WR250X:

O modelo WR250R pode ser empregue de duas formas diferentes e pode ser utilizado em todo-o-terreno, onde o controlo e o domínio dos travões são factores muito importantes. Este modelo utiliza um disco de travão dianteiro com um diâmetro externo de 250 mm, uma pinça de dois pistões e pastilhas concebidas para corresponderem ao disco do travão, no sentido de alcançar um controlo de travagem preciso. No entanto, o WR250X é um modelo supermotard que exige um bom desempenho de travagem a velocidades mais elevadas, utiliza um disco de travão dianteiro com um diâmetro externo de 298 mm, uma pinça de dois pistões e pastilhas concebidas para corresponderem ao disco do travão maior, no sentido de alcançar uma maior capacidade de imobilização.

WR250R

Brake calliper
Two pistons
(different diameter)

Brake disc

WR250X

Brake calliper
Two pistons
(same diameter)

Brake disc

Em comparação com muitas pastilhas de travões à venda no mercado de reposição, as pastilhas de travões genuínas Yamaha foram concebidas para corresponder a vários objectivos diferentes, tais como:

- > Bom desempenho de travagem
- > Resistência ao enfraquecimento gradual (redução da eficiência de travagem perante o aumento da temperatura)
- > Estabilidade da eficiência de travagem ao longo de uma elevada amplitude térmica
- > Longa vida útil

PEÇAS GENUÍNAS YAMAHA – PARA GARANTIR A SEGURANÇA!

Todas as peças têm de passar por testes de desempenho e durabilidade muito rigorosos antes de se considerarem peças genuínas Yamaha. Para os componentes do sistema de travagem, estes testes são extremamente rígidos, uma vez que é a segurança que está em jogo. Os testes incluem adesão entre a placa de pressão e o material de fricção, testes de desgaste, vibração, resistência a baixas temperaturas e testes de pulverização. A Yamaha não poupa esforços para optimizar a combinação de pastilhas de travões, pinças e discos ou calços e tambores de travões.

Kits de transmissão

A QUALIDADE DAS CORRENTES E CREMALHEIRAS GENÚINAS

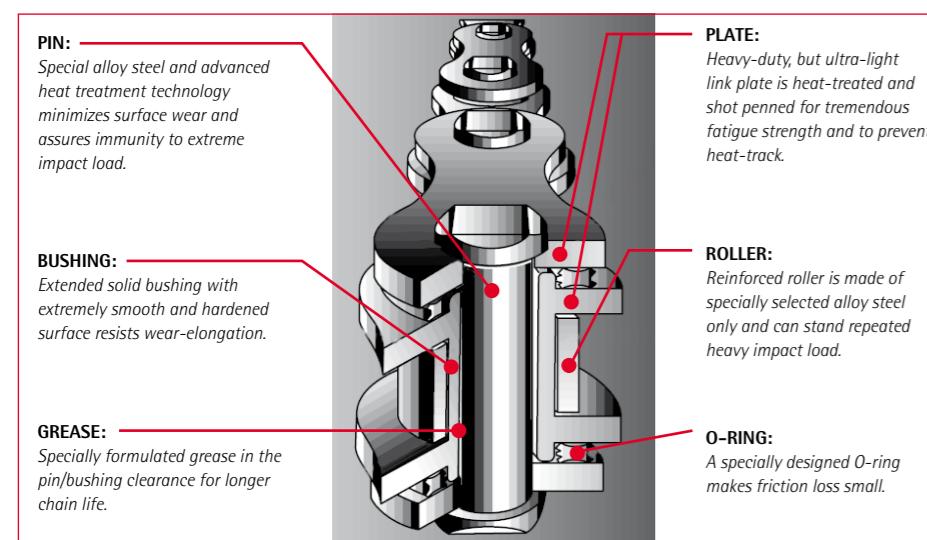

Nenhum outro tipo de corrente é solicitado num ambiente tão exigente quanto a corrente de um motociclo. A diferença entre uma corrente boa e uma corrente má pode ver-se mais claramente através do grau de esticamento causado pelo desgaste e da resistência à fadiga. As correias de qualidade superior possuem as seguintes características:

- > Boa resistência ao desgaste
- > Boa resistência à fadiga
- > Capacidade de suportar choques e força de tração
- > Juntas/ligações que permanecem flexíveis

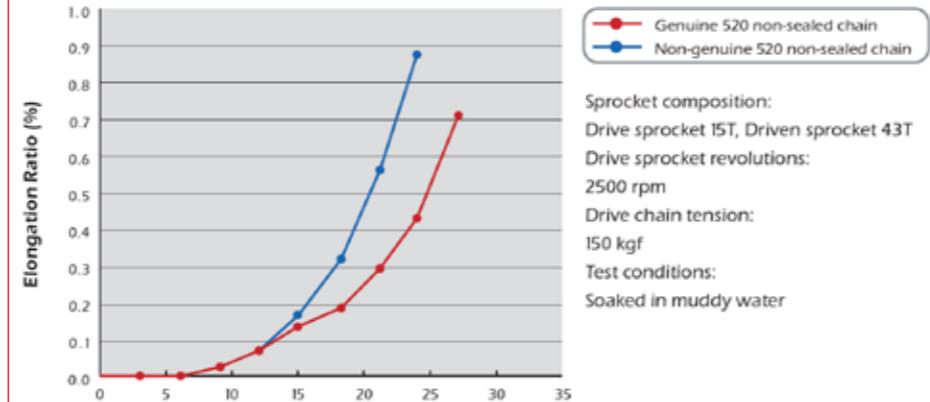

De um modo geral, uma corrente de transmissão tem de ter força e durabilidade suficientes para corresponder à potência do motor e à rigidez do material de fabrico, seja a cremalheira ou pinhão. As placas laterais, que podem ser consideradas a "estrutura" da corrente de transmissão, também têm de ter a resistência necessária para suportar a força de tração a que a corrente está sujeita.

Os dentes do carreto e as outras peças sujeitas a forças intensas são fabricados com toda a rigidez possível, através de um método que envolve tratamento térmico denominado témpera, após o qual os carretos se encontram temperados para reduzir gradualmente a rigidez em direcção ao interior, no sentido de produzir um carreto resistente com a força ideal.

A utilização de kits de transmissão genuínos é a única forma real de assegurar uma correspondência perfeita entre os carretos e a corrente, alcançando assim uma vida útil máxima, tanto para os carretos como para a corrente!

Wear and Fatigue Comparison of Genuine Non-sealed Chains and Non-genuine Non-sealed Chains

Correias de transmissão genuínas para uma maior resistência e durabilidade

ESPECIFICAMENTE CONCEBIDAS PARA CORRESPONDER ÀS CARACTERÍSTICAS DOS VEÍCULOS!

As correias de transmissão genuínas Yamaha foram concebidas para apresentar uma força e durabilidade máximas, visando corresponder aos requisitos específicos do veículo em que serão utilizadas. A borracha em que são fabricadas as correias trapezoidais é muito sensível à temperatura, sendo a diferença de alguns graus apenas pode exigir uma alteração substancial de uma especificação da correia. As correias de transmissão genuínas Yamaha utilizam os melhores materiais à base de borracha disponíveis para apresentar um melhor comportamento perante diferenças de temperatura e para conferir um maior nível de durabilidade. Se a correia trapezoidal for de qualidade inferior, pode partilhar durante a utilização, pode ocorrer a perda de transmissão, ou mesmo o bloqueio das rodas, resultando numa situação potencialmente perigosa.

DESIGN E MATERIAIS ADEQUADOS PARA UMA LONGA VIDA ÚTIL

As correias genuínas Yamaha foram sujeitas a testes intensivos, na sequência dos quais o material em que é fabricada a correia, bem como o comprimento e a largura da correia foram especificamente concebidos, concedendo às correias uma maior durabilidade e uma vida útil mais prolongada. A correia de baixo perfil em combinação com uma polie pequena oferece um bom nível de flexibilidade e possui uma resistência superior à temperatura.

Os componentes da transmissão, as correias de transmissão genuínas para todos os modelos Yamaha foram fabricados e desenvolvidos como um "sistema de transmissão" completo para conferir durabilidade, resistência à abrasão, ao calor adequadas à potência do motor.

Desenvolvimento com base no modelo

Os motociclos com elevada cilindrada transmitem cargas mais intensas ao sistema de transmissão, por isso, o nível de resistência da correia de transmissão exigida varia consoante o tipo de veículo. Os materiais de fabrico e os tamanhos das correias são seleccionados com base em cada modelo. Um dos mais conhecidos modelos da Yamaha, o XV1900, é um modelo de grandes dimensões para ter espaço para acomodar um sistema de transmissão cuja correia de transmissão é larga para aumentar a resistência, ao passo que a do modelo XVS1300 é reforçada com outro material, uma vez que este modelo está sujeito a limitações de espaço relativamente à largura da correia de transmissão.

No caso das scooters, a correspondência precisa entre a correia, os pesos dos variador e a polie é importante para especificar a correia presente no sistema de transmissão, por isso, uma correia trapezoidal não genuína poderá impedir que o motor apresente um desempenho à altura do respectivo potencial máximo.

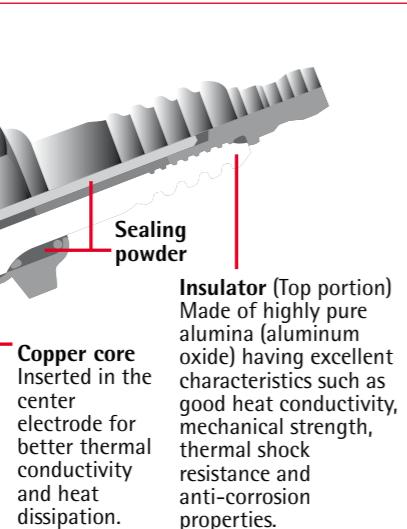

Velas de ignição

AS CARACTERÍSTICAS DAS VELAS DE IGNIÇÃO DEVEM CORRESPONDER PERFEITAMENTE AO MOTOR!

No que diz respeito às velas de ignição, é importante localizar a faísca precisamente na área pré-determinada da câmara de combustão para assegurar um óptimo desempenho do motor. Os factores relacionados com as características do motor, tais como o formato e o tamanho da câmara de combustão, o número e o tamanho das válvulas de admissão e de escape e o ângulo das válvulas são todos aspectos a considerar ao escolher uma vela de ignição. Se não for possível encontrar a vela de ignição adequada na fase de desenvolvimento do motor, os engenheiros da Yamaha concebem e desenvolvem uma vela de ignição totalmente nova.

Por exemplo, o modelo de 2009 e, posteriormente o modelo YZF-R1, tem um valor de RPM elevado, um diâmetro elevado e uma curta explosão na câmara de combustão, oferecendo uma potência do motor superior e uma amplitude de temperaturas mais abrangente. As características das velas de ignição correspondentes a características anteriores não podriam ser totalmente arrefecidas, por isso, foram desenvolvidas velas de longo alcance com uma rosca de comprimento elevado.

Assim, é importante utilizar a vela de ignição específica para determinado modelo, no sentido de alcançar o desempenho máximo do motor e evitar danos ao mesmo.

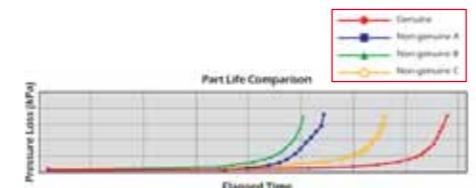

VIDA ÚTIL DA VELA DE IGNIÇÃO PARA UM ÓPTIMO DESEMPENHO A LONGO PRAZO

Mesmo aquando da utilização normal, as velas de ignição requerem uma substituição periódica, uma vez que terão sido utilizadas durante muito tempo, terão começado a degradar-se, possivelmente registam mais falhas de ignição, causando a pré-ignição e consequentemente o menor desempenho do motor e a redução da poupança de combustível. Por fim, podem ocorrer graves danos no motor! Tendo em conta tudo o que foi referido, a Yamaha seleccionou as melhores velas de ignição para cada modelo da sua gama.

Filtros de óleo

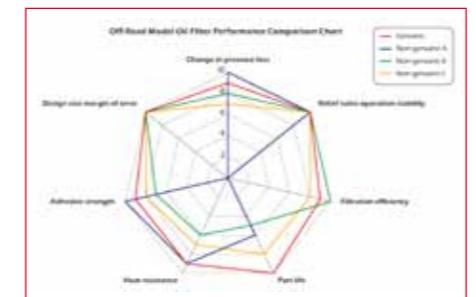

O FILTRO DE ÓLEO AJUDA A IMPEDIR A INFILTRAÇÃO DE MATERIAIS ESTRANHOS NO MOTOR

O filtro de óleo limpa o óleo do motor à medida que este circula pelo motor. Se o filtro de óleo não for substituído periodicamente, pode entupir devido aos resíduos e é possível que o óleo do motor comece a circular sem passar através do filtro, facto que pode aumentar substancialmente o desgaste do motor e, em consequência, reduzir a vida útil do motor.

No âmbito da comparação da vida útil de filtros, o filtro genuíno revelou durar mais tempo do que qualquer componente não genuíno, sendo que respeitando o intervalo de manutenção indicado no manual do proprietário, que teve como base a utilização de um filtro de óleo genuíno, se forem utilizados filtros de óleo não genuínos durante o mesmo período de tempo, existe um risco significativo de entupimento.

Neste exemplo, o filtro genuíno Yamaha apresentou características gerais superiores, possuindo o mais elevado nível de desempenho dos quatro produtos sujeitos a comparação.

Óleo e produtos de manutenção Yamalube

A gama Yamalube oferece uma ampla variedade de fluidos técnicos, desenvolvidos em cooperação e testados pelos mesmos engenheiros responsáveis pelos motociclos e scooters Yamaha. Atrevemo-nos a dizer que os fluidos técnicos Yamalube são os melhores para manter qualquer veículo Yamaha na estrada ou no circuito!

Yamalube Care Products:
Giving a Yamaha the care it deserves!
Estamos empenhados em manter todos os motociclos Yamaha em perfeitas condições. Neste sentido, desenvolvemos uma gama completa de produtos de manutenção de motociclos com as melhores características. Desde o "Fuel Stabilizer" (estabilizador de combustível para guardar o seu motociclo correctamente durante longos períodos no Inverno) ao "Pro-active Cleaning Gel" (gel de limpeza pró-activo) para remover até a sujidade mais persistente de um motociclo: A gama Yamalube tem tudo!
